General Description

The 8002 is a Class-AB audio power amplifier. It is capable of delivering 2.0 watts of continuous average power to an 4Ω BTL load with less than 10% distortion (THD+N) from a 5V_{DC} power supply, or 1.5 watts continuous average power to an 8 Ω BTL load with less than 1% distortion.

The 8002 is designed specifically to provide high quality output power with a minimal amount of external components. It does not require output coupling capacitors or bootstrap capacitors. The 8002 is ideally suited for audio speakers and other low voltage applications.

With special pop-click eliminating circuit, the 8002 provides perfect pop-click characteristic during turn-on and turn-off transitions.

The 8002 is unity-gain stable and can be configured by external gain-setting resistors.

Applications

- ☐ Audio speakers
- ☐ Desktop computers
- ☐ Low voltage audio systems

External Components Description

Components	Functional Description
Ri	Inverting input resistance which sets the closed-loop gain in conjunction with Rf. This resistor also forms a high pass filter with Ci at $f_c = 1/(2\pi R_i * C_i)$.
Ci	Input coupling capacitor which blocks the DC voltage at the amplifiers input terminates. Also creates a high-pass filter with Ri at $f_c = 1/(2\pi R_i * C_i)$.
Rf	Feedback resistance which sets the closed-loop gain in conjunction with Ri. The gain is $A_{VD} = 2 * (R_f / R_i)$.
Cs	Supply bypass capacitor which provides power supply filtering.
Cb	Bypass pin capacitor which provides half-supply filtering. Refer to the section.
